

APPLICATION OF DECISION SUPPORT SYSTEM (DSS) FOR TOURISM PLANNING SYSTEM USING CLIENT SERVER ENVIRONMENT

Prepared by: Yong Meng Neng

ABSTRACT

This project investigates on what Decision Support System (DSS) is all about and the decision-making concept that are relevant to Tourism System. Besides that, this project also investigates some client server concept. Tourism System is a tool to help the potential travelers to choose the suitable places for their vacation. The travel company itself and its customers will use this system as well. This system is developed to help people to gain more information of interesting places in the South East Asia. The system will ask the user about the budget of the trip. In addition, this system also gives ease for the company to record the customers' data, and information about tourism places. Potential travelers can interact with the system easily through user-friendly interface of the system. By having this DSS System, the potential travelers will save their time in doing research or searching information.
