DESIGNING AND IMPLEMENTING AUTOMATIC ONLINE TRADING SYSTEM USING INTERNET AND MOBILE AGENT TECHNOLOGY

Prepared by: Huang Zunjou(Noah)

ABSTRACT

With the rapid growth of e-commerce, more and more online shopping website appeared. However the flooded information in the website might cause it hard to find specific information. This project aims to solve this problem. It includes two main modules, one is a website with database symbolize the marketplace. The other module will apply mobile agent technology, which enable the web client user to create their trader agent and send to the remote marketplace and represent them to negotiate with other traders and close a deal.
