

A STUDY AND IMPLEMENTATION OF GEOGRAPHICAL ROAD DIRECTORY AND GUIDANCE INFORMATION SYSTEM OF ROUTE FOR WOO SDN. BHD.

Prepared by: Chan Lup Qewang

ABSTRACT

This system is meant for Woo SDN BHD staff that makes a living out of business that required traveling. The problem that the staff faced is the inability to memories the location of their client, especially when wide area are covered, for example major cities. So with this system the staff needs not to recall those locations as the system will help the staff to pin point the locations of those client. The system functions as a map that can show the user the location, name, type of activity or transaction done with the client and the address of their clients. For adding of new clients, the user can simply add a mark on the map and enter all the particulars about the new client. And for further updating old client data the user can directly click on the mark indicating the client location on the map to retrieve the data for updating.
