

# **STUDY AND DEVELOPMENT OF A TIME TABLE SCHEDULING SYSTEM FOR GOVERNMENT'S PRIMARY AND SECONDARY SCHOOL INSTITUTIONS**

Prepared by: Lee Chee Khoon

## **ABSTRACT**

---

Many years ago before computer technology being used popularly, scheduling a time table for a school and college is very complicated task and time consuming process. Education institutes used a big board, hanging with many colored cards to represent teachers and these cards were written with subject names. They needed a long period of time o schedule a complete time table especially when there is only one person responsible on this task. Today, however there is still no particular system to schedule a time table for schools. Even though there is, the system is still manually to generate a time table. This project is to develop an automated time table scheduling system. It is because; nowadays people hope to do things faster and more effectively. This system will be developed by aiming the weaknesses of current manual system. Of course, it will also be more user friendly, stable, faster and helpful to Malaysia government's primary and secondary education institutions.
