A STUDY ON INTERNET TECHNOLOGIES AND IMPLEMENTING A RADIO STREAMING RECEPTION FOR INTI COLLEGE MALAYSIA BY USING ACTIVE SERVER PAGE

Prepared by: Lim Kiang Pang @ Veno Lim

ABSTRACT

Nowadays, streaming technologies are becoming increasingly important with the growth of the internet because most users do not have fast enough access to download large multimedia files quickly. With streaming, the client browser can start displaying the data before the entire file has been transmitted. At the same time, this technology has changed the way we tune in to television r radio too. One can now just log on to the internet to tune in to these broadcast on the internet. With the improvement of bandwidth, streaming applications have become a viable commodity.

One of the most common ace where streaming is applied will be internet radio. It seems that everybody is hopping onto this technology as it is very easy to set up and can be done at a minimal cost. All a person needs is to download the server software and the person can be a DJ on the internet domain.

Other than that, the piracy issues getting more serious in many countries, many songs download web page had been terminated and file sharing software like Napster and Kazza has caused copyright issues for the originality of the owner. So that, develop an online radio streaming system might overcome the needs of music lovers.

Therefore, the author would like to take this opportunity to explore the wonders of streaming technology through the web page.
