

# **A STUDY AND DEVELOPMENT OF AN E-RETIREMENT FINANCIAL PLANNING APPLICATION**

Prepared by: Looi Suk Yi

## **ABSTRACT**

---

This project aims to study on the activities involved for a financial and further proposes a web-based retirement financial planner to run their business online. Besides that, it provides the financial convenience to the clients in planning their investment when they retire or even before they retire. Meanwhile, the financial planner can store the client's data in a centralized database and all they need is just to retrieve the data from the database. In addition, the main function of this system is to generate the calculation of the client income and do the analysis on the income and further suggest and allocate the client money into proper investment, such as education fund for their kids. The proposed system aims to improve the effectiveness of the financial of financial planning business
