

STUDY AND IMPLEMENTATION OF AN ONLINE SURVEY SYSTEM FOR INTI COLLEGE MALAYSIA STUDENTS

Prepared by: Chen Yeah Teck

ABSTRACT

This project aims to conduct a study on the online survey system that focuses on assisting student in INTI College Malaysia to conduct survey. It studies the usefulness of the survey system in helping students to conduct survey among the community within the college. Information will be gathered from students and lecturers to analyze the frequency and usefulness of survey in their assignments, projects as well as dissertation and double module project. This system will allow students to design their own questionnaire and collect the data for their work from the INTI College Community. The application will only be available in a Local Area Network of INTI College Malaysia. After posting their questionnaire, targeted group of people will be invited to fill the questionnaire from any Internet terminal available in the College. At the end of each survey, a simple report contains statistics of the survey and informational chart will be generated to simplify the surveyed data. The system also stores previous survey results that are accessible to students and lecturers. The system will allow the students to gather more data for their work and in a more faster, effective and efficient way.
