A STUDY AND IMPLEMENTATION OF AN ONLINE APPLICATION AND PROCESSING SYSTEM TO FACILITATE THE GRADUATION PROCESS OF INTI STUDENTS

Prepared by: Fathima Nasrin Abdul Malick

ABSTRACT

This project aims to enhance the graduation process involving various activities and departments to an integrated and seamless processing of data online through the development of an online application and processing system. It focuses on the study and development of a web application to create a dynamic system using a web development tool such as ASP.net as the technology and VB.Net as the programming language. This project is meant to be an additional feature of the e-campus to complement other features such as e-pride, e-admin and others. Among the features of the proposed system are electronic forms, cross referencing of databases among various departments, online processing, online database for students, and others. Ultimately, this project hopes to improve the efficiency of the graduation process, cut down the turnover time from the moment a student starts the approval for graduation process until they completes and basically solve the problems encountered when the graduation process is done manually
