

A STUDY AND IMPLEMENTATION OF AN ONLINE COURSE FOR TEACHING FIRST AID KNOWLEDGE

Prepared by: Yap Kian Xiong

ABSTRACT

This project is a web-based information system about basic first aid knowledge and provides e-learning features. The e-learning system will be able to help users to adopt any first aid knowledge by logging in to the website and learning through the lessons provided. This website will also provide different types of first aid knowledge based on the condition or situation like “First aid work place” or different health care information like “SARS”. Besides that, this website also provides FAQ and users also can send their queries to solve their problems. Lastly, there will be a mock test for the users to test their result after they learn through this e-learning program. As a conclusion, this website will help to encourage more people to learn on the first aid knowledge and as they can easily access this learning through this interesting website. With the first aid knowledge gained, small accident can be easily handled or even prevented before happening
