

STUDY AND IMPLEMENTATION OF AN ONLINE MEMBERSHIP MANAGEMENT SYSTEM FOR A COMMUNITY WITH E-COMMERCE FEATURES

Prepared by: Nina Vovera Umar

ABSTRACT

This project is about an in-depth study of creating an online system to manage a community club's membership and applying some e-commerce features. This system will provide features such as the membership management, booking facilities, online ordering and provide necessary information. Currently, the communication with the community members is done manually such as distribution of newsletters and flyers, which is costly and time consuming. Since the use of internet has been increased rapidly and the majority of the members are internet users, it allows easy access and able to improve the communication with the members and among members
