DEVELOPMENT OF ONLINE ROOM BOOKING SYSTEM FOR ACCOMMODATION OF INTI COLLEGE MALAYSIA

Prepared by: Zhou JieRu

ABSTRACT

This project investigates the real work situation of accommodation office of INTI College, and then to further analysis to develop a multiple-functional online room booking system to improve the efficiency and effectiveness to support reserve operation that operate every semester. The proposed system will let the INTI students make reservation easily and see the latest news about the accommodation office and makes complain about whatever they are not satisfied. It also helps the accommodation office to maintain their check-in and check-out procedure, room status and resident status. In order to supply the convenience to the managers in staff allocation and position arrangement, the function of the employee information management is considered in that system. The system is considered as deliverable and meets the requirements since every semester they will check for booking or reserve new or existing room. Finally, this system can generate variable kinds of reports to provide the reliable references in operational condition of the company, for assisting the manager in decision making.
