A STUDY AND DEVELOPMENT OF AN ONLINE SELLING SYSTEM OF MOBILE PHONE WITH PRICE COMPARISONS BETWEEN VARIOUS MERCHANTS

Prepared by: Irwan Suherlan

ABSTRACT

This project entitled "A study and development of an online selling system of mobile phones with price comparisons between various merchants" is developed is basically about allowing customers to efficiently and effectively compare mobile phones price offered by various merchants.

In order to support online comparison, the system developed in the end of the project allows merchants to register and sell their mobile phones online. They can specify the price, quantity, and additional information such as warranty and free gifts (such as mobile phone covers and head phones) of the mobile phones they offer.

Besides that, in order to allow customers efficiently and effectively choose better merchants, customers are allowed to provide reviews for merchants and to view reviews written by other customers for a particular merchant.

The customers are also allowed to order mobile phones from the desired merchant online. In order to makes the online orders, credit card information is required to settle the payment.
