

STUDY AND IMPLEMENTATION OF E-MAGAZINE ON OVERCLOCKING AND CASING MODIFICATION

Prepared by: Loh Chang Jiunn

ABSTRACT

When people have the basic knowledge on the computer troubleshooting, they will eventually go into a different area of knowledge. Area of problem is such as to make the computer go even faster without getting any new hardware or devices. All these problems can be overcome if certain overclockers know the right way to overclock. Besides than overclocking, another area that overclockers can do is by modifying their casing whereby it can provides circular air flowing inside the computer casing where it provides circular air flowing inside the computer casing where the hardware is installed. Just by installing a few good fans and having an aluminum casing, the different can be noticeable. The objective of this e-magazine is to provide useful information regarding overclocking and it also shows the outcome of certain hardware that was removed from the computer. The e-magazine is constructed based on a certain designing concept because it will attract more people and they will have the tendency to browse it. The e-magazine can also be a guide as well as reference to those who are interested.
