

DEVELOP AN INTERACTIVE TEACHWARE OF LEARNING ENGLISH ABOUT DAILY LIFE FOR CHILDREN BETWEEN THE AGES OF 4 TO 6

Prepared by: Choong Ai Peng

ABSTRACT

This application is specially designed, integrating the audio-visual effect to help the children to learn English at their own pace. It can improve their English and make the children more interesting on it. This idea is to promote independent learning habit among children. It also an important tool to guide them to read and understand simple words, sentences and follow simple instructions. It is a multimedia learning system this can help the parents and teachers in teaching children English. This application include alphabets, our face and body, color, , animals, clothes, classroom, houses, signs, fruits, and songs which will use graphic, text, animation and sound to create it. Objects are accompanied by precise pronunciation and a short description. It includes challenging games to captivate children's creative thinking skills and helps them to learn how to pronounce the alphabet as well as difficult words correctly in a fun and easy way. The buildings and equipments will make in 2D. it helps to make the interface more attractive. Use animation to present the songs. It can make the children learn things easily and pay attention on it.
