IMPLEMENTATION OF 2D AND 3D ANIMATION IN INTERACTIVE CD FOR DRIVING SCHOOL

Prepared by: Gloria Soong Chee Wei

ABSTRACT

This proposed system is developed for the user who wishes to become a driver by learning about current traffic signs and regulations in order to pass their driving test. The purpose of using this system is to let user have a well-prepared on the driving techniques before the driving test. It also let the user more understanding and clear about the skills in driving. The proposed system will use a car which drives along the journey with animated traffic sign. When a car reaches through a particular traffic sign it will show some effect. This is more attractive than reading a book. Besides that, techniques on how to maintain a car for the use are available. Thus, some proper way of driving tips will also be shown. Software such as Macromedia Flash, Macromedia Director 8.5, and Adobe Photoshop will be sued in developing the proposed system.
