STUDY AND DEVELOPMENT OF J2ME ENABLED HANDPHONES BASED APPLICATION

Prepared by: Fan Chee Yen

ABSTRACT

This project is going to develop a mobile phone application (MlDlet) which deals with different countries currency rates and their local time display. It is developed mostly for the convenience of travelers and businessman. The strength of this MlDlet running on mobile phone are:

- The great mobility of cell phone
- The fast information access to internet through GPRS
- 2-in-1 (currency exchanger and view international time) MlDlet on mobile phone for users east-access
- International network roaming services are enabled at any corner around the globe these days

Hence, users may have accurate currency exchange and international time displayed at anytime, anywhere.
