

KIOSK SYSTEM FOR NOKIA MOBILE PHONE ENHANCED WITH SIMULATION

Prepared by: Ng Meng Aik

ABSTRACT

This project will study on the multimedia development software that develops interactive multimedia application. It is an information kiosk that will display and show all information and feature of each model and each brand mobile phone. Users able to check out information and feature of all the mobile phone through this kiosk system without face any cheat during purchasing. This kiosk system will integrate a few simulation of mobile phone model which user can use and interact like using real the mobile phone. In addition, this system will integrate 2D and 3D animation for make the current system more attractive and interesting the price of mobile phone can be updates at any time. This system also have link to official web sites for introduce and describe about hand phone. The benefits of this system is sales person of hand phone not need waste a lot of time to introduce hand phone to customer and customer able to find out the detail about hand phone before purchasing. Finally, the scope of the system is whole building of particular shopping center which current system has been located.
