

A STUDY AND RESEARCH OF IMPLEMENTING MULTIMEDIA ELEMENTS IN BASIC FIRST AID GUIDANCE WITH STEP-BY-STEP DEMONSTRATION FOR CHILDREN

Prepared by: Gan Wei Lieh

ABSTRACT

This project is to guide users on how to apply first aid knowledge in their real life. The content of the project consists of the knowledge and information about what is first aid and why it is so important. The main purpose of this project is to improve user's knowledge on first aid and provide general preview on basic first aid techniques using 2D animation. This project will show the user about the usage of items provided in a first aid kit. Generally, the project provides step-by-step instructions using 2D animation that will guide users on how to apply first aid items and techniques. The system allows interactivity with user whereby user can choose their favorite topic. Simple icons and vector graphics are created for the children from ages ranging 8 to 12 years old.
