

STUDY AND IMPLEMENTATION OF LINUX INSTALLATION SHIELD WITH GUI

Prepared by: Ko Chai Roang

ABSTRACT

The project main objective is to produce an easy-to-use and user-friendly installer shield. Currently, when user tends to install a new package into LINUX, the user is required to do it in the command base. This seems very easy for expert users, it is hard for those who are not familiar with all those command script. Users more prefer to use the Windows operating system better where installation shield is easier. In this project, the author will explain how the system could be developed based on his own ideas. Hence, a framework is going to be proposed for the information analyzed through the data gathered. Besides the development part, the author has to conduct some research on the system and on the Linux system users.
