STUDY AND IMPLEMENTATION OF VIDEO SURVEILLANCE SECURITY SYSTEM IN WINDOWS PLATFORM

Prepared by: Tay Kwai Fui

ABSTRACT

This project researches the study and techniques that implemented on the Video Surveillance system. Nowadays, video surveillance system becomes more important if compared to the age's time ago. In conjunctions, mounting video cameras is cheap, but finding available techniques to implement and enhance with some features on it become more generous and famous in our daily life. Since the issue of security is falling down in recent years, developing a video surveillance system by enhancing some features is advisable in order to suit the technologies in the world today. Therefore, what is needed is continuous 24 hours monitoring or automated of surveillance video to alert security officers to a burglary in progress, or to a suspicious individual loitering around the company compound or the parking lot.
