

A STUDY OF CONSERVATION AND MAINTENANCE MANAGEMENT OF SULTAN ABDUL SAMAD SECRETARIAT BUILDING IN KUALA LUMPUR

Prepared by: Nurul Haslin Binti Zainal Abidin

ABSTRACT

Malaysia is a country that has its own architectural heritage. The architecture in Malaysia is varied ranging from very old building to very modern high rise building. Malaysia is one developing country, however the building conservation are currently new.

The study consists of a research about the conservation process and maintenance management of Sultan Abdul Samad Secretariat Building in Kuala Lumpur. It was identified that conservation of this building is very complex and requires in depth understanding of its concept and implementation process to be successful.

Conservation requires the awareness and appreciation of the aesthetic value, architectural and design of the heritage and historical building. In the research, the information was obtained from face to face interview from the person that was responsible for the maintenance management thus concludes the appropriate ways or recommendation to maintain and protect these historical value.

All technical information, articles are attached in the appendices of the project report for further references.
