

A Time Delayed Model Rocket Launch Control

Prepared by: Lai Chang Huei

ABSTRACT

My project title is the “A Time Delayed Model Rocket Launch Control”, so the content of this project is mainly about the introduction and the summary about my project title, the process of designing, construction, testing and application of an electronics circuit. It is an assembly of various kinds of electronic components on a circuit board. Besides that, in the final project report, also include the explanation on what is my project and how my circuit work.

Attach with this final project report will also include the pictures and diagrams of the project and the components. The data sheets of the component used also will be included. The final part of this report will be the reference list that I have made during the process of completing the project.
