

# Design and Build Self Cleaning Toilet

Prepared by: Ng Meng Wei

## ABSTRACT

---

My project title is aptly called “Building and designing a self-cleaning toilet”. This “invention” is basically a concept whereby the toilet seat will be automatically wiped and cleaned using a motorized “wiper”.

As a whole, the “body” of this report can be broken down into 3 main stages, which are analysis, results and construction.

The first part of this report is the initial stage of analysis which consists of brainstorming and conceptualization. This is followed by the result stage (final design, calculation and Gant chart) and finally, the construction stage which involves AutoCAD drawing, parts list, electrical diagram & project appendix.
