

Perfect Square Screen for The Overhead Projector

Prepared by: Hoi Wei Yang

ABSTRACT

As you can see two interesting words print out on the cover page, “perfect image”. What is “**perfect image**”? How do we define “**perfect image**” in this project?

When we are holding a transparency, we can see words or image that has printed on it, so when we put the transparency on a projector, mostly what we hope to see on the screen of the projected image has to be almost the same as the image printed on the transparency, then only we said that the projected image is perfect in this project.
