

CROWD GENERATOR

Prepared by: Quek Zheng Yi

ABSTRACT

This report consists of the research on the crowd generator as well as the previous project on crowd generator. The research portion covers the criticism made based on the previous project of crowd generator such as pros and cons, materials used mechanism between the new design and the previous design.

Brief explanation on the new mechanism, working principle, dimensioning of the device, calculations as well as the problems encountered are also included in this report. Later, there will be a step-by-step process on the construction of the prototype of the crowd generator, the result analysis and the conclusion.
