

# WIND TURBINE CEILING FAN

Prepared by: Lai Poh Heng Alan

## ABSTRACT

---

This project is an example of application of a Wind Turbine Ceiling Fan in the real world that is addressed any house to save electricity bill and live with a greener environment. A wind turbine is a device that converts wind energy from the wind into mechanical energy. In my project wind turbine and ceiling fan are working together to produce wind for indoor, so need to convert to wind energy to mechanical energy for ceiling fan.
