

STUDY OF THE SAFETY RULES OF HIGH RISE BUILDING IN KLANG, ARUNAMARI SPECIALIST CENTRE

Prepared by: Donesvaran Ganesan

ABSTRACT

Safety law or safety regulations are implementing to the high rise building to ensure that the employee, property and equipment are being safe and keep away from injury, danger or damage during construction.

The entire project is a research on safety regulations in a high rise building construction site. Safety laws are implementing to the construction site to ensure that the employee working at a free from of recognized hazard's environment and enforcing work place safety and health standard. Safety law that common use in Malaysia will be introduced and the clauses will be explained in detail in this report such as OSHA, NIOSH and FMAS. Besides, safety laws and regulations that implement to the high rise building construction will also be specifying clearly in the report.

Moreover, I am going to conduct a case study to my research in order to know more detail on the safety knowledge on high rise construction. At the end of the research, I am able to understand not only the theoretical but also the practical of the safety laws and regulations that are implemented to a high rise construction field.
