

# DIGITAL PIN LOCK USING PARALLEL PORT

Prepared by: Sridaran Shaseederan

## ABSTRACT

---

Like most reports, this report is arranged in an orderly manner to help ease the reader when reading the paper. A complete navigation guide is available in the contents after this section. It should be able to guide the readers around the report to find information and details that interest them.

To better understand what this project is, an introduction section is provided to brief the understanding of the project, followed by the objectives and the components and various information regarding the hardware and software of the project. The project report consists of block diagrams and Flowcharts to illustrate the functions of particular topics. Also a few snapshots of the coding will allow the reader to understand better how the program runs.

For an overall view of the entire project, the reader can look at the conclusion at the end of the body section of this report. There is a summary for the entire project that gives the reader a general view on the projects outcomes without reading the other parts of the report.

Finally, a list of all the references is also available at the end followed by the appendix, which contains information, research and the programming that are used for the construction of the project.
