

AIR COMPRESSOR RIFFLE

Prepared by: Wong Cheng Heng

ABSTRACT

My project title is built up my homemade air compressor riffle. It is normally small air powered rifles that shoot relatively small projectiles, primarily used for target practice. Usually, they are pumped up with a hand pump, activated by hinging the barrel towards the stock.

The following contents will tell you more in detail about my homemade air compressor riffle as well as the introduction, the application of the engineering theories, the preliminary and detail design manufacturing and the conclusion. On the other hand, the picture will be provided on my report clearly.

After reading this report, the reader should be more understanding about my project “Homemade Air Compressor Riffle” and the idea behind it. In my opinion, that is an easy work and funny experience for me. If you have a time, you can try to build it up yourself.
