

# DESIGN & DEVELOPMENT OF ROBOTIC SECURITY GUARD FOR MULTI-LEVEL CAR PARK SYSTEM

Prepared by: Cheen Weng Kiong, Kee Wei Loon, Wang Chen

## ABSTRACT

---

This project tends to cover the loopholes in traditional security system for multilevel car park. Like most of the factory where tedious and monotonous work used to be done by human was replaced by worker that knows no tired and feel boring of monotonous. Using this concept, we shall change the way security guard secure the car park.

As we all know, car park mostly is isolated from public and the culprit usually take care park as their hunting ground for crime. Te robotic security guard which is located on every floor shall be control to crime scene to for reconnaissance and only shoot as last resort. The main objective is to prevent crime before it happens.
