

AMUSEMENT PARK WITH A VERTICAL FREE FALL RIDE

Prepared by: Vincent Jong Hung Wei, Kumaravel Rajoo, Lo Wen Liang, Kiung Jeon Shii

ABSTRACT

Amusement park is the generic term for a collection of rides and other entertainment attractions assembled for the purpose of entertaining a fairly large group of people. An amusement park is more elaborate than a simple city park or playground, as an amusement park is meant to cater to adults, teenagers, and small children. Most amusement parks consist of a vertical free fall ride where the ride is carried to the top and then dropped at free fall speed. This is the main attraction that will attract customers. The ride can be dangerous but if the ride is built with maximum safety it is safe to ride. We will also include a food court where a pleasant view of the ride can be seen and some convenient shops. Our site location Nilai, Malaysia was chosen as our project site. Site selection was carried out and the necessary civil works were designed accordingly. This proposal will provide Nilai with more entertainment and more places of attraction.
