

AUTOMATIC BROADCAST STATION FOR LANDSLIDES

Prepared by: Tan U-Hsiang, Lucia Jong Sie Ping, Ooi Jing Si

ABSTRACT

The function of this Automatic Broadcast Station is that when there is landslides occurred, it will automatically send a warning message to radio DJ and then only to the radio listener. It will take a shorter duration of time of the warning message is send directly to the radio listener. The question is how are we going to design a system that will save our time. The content of this report will explain further on how it is constructed.
