

SAFETY MANAGEMENT

Prepared by: Alton Ronald Carroll

ABSTRACT

In this report you will read about the various causes of accidents and how to avoid them. There are also sections on Hazardous Operations, Personal Safety Equipment and fire Protection. The occupational Safety and Health Act 1967 (FMA) is also highlighted. For more than 25 years our country has been using the FMA regulations, why change? Also what is the latest fashion for the construction site? All these questions and more are answered in this report.

In short this report makes a good read if you want to know about safety in construction sites. Safety is everyone responsibility, not just the safety engineers or the managements responsibility. It refers to everyone everywhere in the world and we if we all took the concept of safety more seriously than there would be fewer accidents and even less fatalities. Safety begins at home, so to make the world an accident free one, we should try our best to follow the safety rules not just on the construction site but everywhere we go.
