

PEDESTRIAN BRIDGE

Prepared by: Lee Ku Liung

ABSTRACT

Pedestrian bridge is designed for the purpose of preparing an easy and safe path for the pedestrian to make crossing from one side of the road over another side of the road. Normally, the bridge is to be built at a very busy and crowded area especially at the middle of the city where it is full of the traffic and pedestrian, the railway stations, highway and byway, building to building and more effectively is over rivers for the domestic usages.

Nowadays, there are more and more pedestrian bridge is going to built because of the country. In this case, it comes up with various kinds of designed pedestrian bridges which constructed by steel and concrete.

According to my design, the pedestrian bridge is situated at the busy traffic and crowded area.
