

DESIGN OF A WAREHOUSE WITH STEEL SUPERSTRUCTURE AND REINFORCEMENT CONCRETE FLOOR

Prepared by: Ulysses Pang Wei Lim

ABSTRACT

This is a report that takes down all the process of designing a warehouse. Here, I will tell you that how to design a building by using the combination of steel superstructure and reinforce concrete. This report is basically classified into three main parts. Which are introduction, calculation and drawing.

First of all, an introduction will guide you through the sections that which will be designed. In the calculation part, some of the steps will show diagram so that reader will understand it easily. The results will be listed out so that it will ease the job when you want to check it, and no need to find it one by one. All the real scale drawings will be shown at the last part of this report.
