

PEDESTRIAN BRIDGE

Prepared by: Wong Soon Fatt

ABSTRACT

Pedestrian bridge is designed for the purpose of preparing an easy and safe path for the pedestrian to make crossing from one side of the road over another side of the roads. Normally, the bridge is to be built at a very busy and crowded area for example: in city.

Nowadays, there are more and more pedestrian bridge is going to built because of the congestion in the busy area. In this case, it comes up with various kinds of designed pedestrian. Which constructed by steel and concrete?

For my design the pedestrian bridge is just for people crossing and located at busy traffic and crowded area.
