

DESIGN OF BUNGALOW (DOUBLE STOREY)

Prepared by: Hong Poh Teck

ABSTRACT

The design of my project is divided into few parts. There are porch, kitchen, dining room, toilet (bathroom), living room, master bedroom, balcony and etc.

All the parts are design step by step by following a procedure, this because all the loading on the building must be calculated and the process must start from the top part and end at the bottom part. For example, the calculation starts at roof and then continues to roof, beam and so on until the foundation. Besides that all the loading and design must satisfy the British Standard safety requirement.

In the report, I will illustrate and show the procedure and information of my project.
