

# DEVELOPMENT OF A COMPOSITE PAVEMENT

Prepared by: Swee Wee Shan

## ABSTRACT

---

This project briefly introduces the two main types of pavements that are commonly used on the road for highway or town will be introduced. All the advantages and disadvantages of these 2 types of pavements will be identified clearly.

Besides, a new type of composite pavement will be introduced and the idea of this pavement is trying to composite the two main types of pavements and gain a new type of pavement that named as new composite pavement.

The new type of design method for this pavement will be introduced and the stability and flow will be tested. To do this, a laboratory work has to be conducted. The tested result is recorded in table and shown in graph.
