

INVESTIGATION THE USE OF PLASTIC PILE IN MALAYSIA SOIL

Prepared by: Soo Hoo Hock Kit

ABSTRACT

The objectives of this project are to expose the project students to the process of engineering design management and practices through the appropriate use of skills and knowledge learned throughout the process.

It is worthwhile reading this project report in detail so that the reader has a clearer view and understanding of the plastic piling, which places are to be used and problems occurred during installation. The advantages and disadvantages of plastic piling also will be discussed in this project report.

In the mean time, the project show contribution of construction works and is importance of the economy. Reading this report will give an ideal of the plastic piling's suitability of application on Malaysia soils.
