

STUDY ON THE COLUMN DESIGN METHOD

Prepared by: Low Chin Huei

ABSTRACT

For this project, my objective is comparing the result of column designed method (Short braced axially loaded column and Bending moment column) from two main point. There is safety and economical. With chapter cost to build a safety building, that's what the engineer, intend to easier our life, I write a program to calculate the column for these two methods which I mention before. In this report, reader can read through a briefly discussion about the result of these two design method and the summary.
