

# THE DESIGN OF A SUSPENSION BRIDGE

Prepared by: Lee Kai Ming

## ABSTRACT

---

The purpose of designing this bridge is because that I wanted to introduce it all Malaysians. Since there is no such bridges in Malaysia, so I would just suggest to all peoples so that they will get familiar with this type bridge and upgrade the standard for Malaysia technology in civil engineering. From, the information that I gather I found that the only sample which we can find in Malaysia is only available in Sunway lagoon, although it is just a small one compare those in U.S but its function is just to be a sample to us, so that those who interested in designing such bridge can just make us the bridges in Sunway as a reference. There I as INTI student will first like to introduce it to all people in our nation.
