

DESIGN OF STEEL LABORATORY

Prepared by: Loh Jin Shu

ABSTRACT

Basically, this project shows all the process of designing of steel laboratory. My design basically is used by the combination of steel superstructure and reinforcement concrete. My project can be divided into 3 main parts:

1. Introduction: giving a brief on my project and guide reader through the section, which will be designed.
2. Calculation: use some specific calculation to do the design work and analysis
3. Drawing: after I obtain the result from calculation part, then does the detail drawing.
