

CLAP BASED SWITCHING FOR DEVICES

Prepared by: Sabrina Rajah D/O Davarajah

ABSTRACT

This report is the final report for my project and it is based on the research and analysis that I have done throughout the construction of the project. I have divided this project report into several sections. They are acknowledgement, declaration, contents, list of illustration and photographic, introduction, body of the report, conclusion, references and appendix.

The list of illustration and photographic records down the location for the block diagram of the project, circuit diagram and also the PCB layout. I have also included some other related diagrams to give a better explanation of how the circuit functions.
