

GUARD SUPERVISORY SYSTEM (GSS)

Prepared by: Asni

ABSTRACT

This project is titled 'Guard Supervisory system (GSS)'. This is a security system, to supervise the guard to ensure whether they perform their tasks or not. This is an integrated system between software and hardware.

In this documentation will introduce what is the GSS system? And the construction of this system, and will follow by the analysis and the outcome (results) of this system. It also includes the cost and time estimations of doing this project.

The objectives of doing this project are to train me on analyzing and understanding the functions of the electronic environment, circuit testing, system troubleshooting, making PCB, and a lot of things I have learnt through this project.
