

VOICE CONTROL CAR

Prepared by: Khoo Wei-Li

ABSTRACT

My project is Voice Control Car. It is a system that is used to control the movement and the direction of a car. This concept is use the voice by human to control a movement of a car, the component that I need in my project is a remote control car, a parallel port cable, a microphone, and a computer.

My project can be used for those people that handicap, because the control movement is by sound but not hand. However, the project currently in a prototype stage, therefore, the project that is presented during the poster presentation, had to be presented together with a remote control car. With further improvement, the system will be running as it is designed to be, and fulfilled the entire characteristic such as in a real car.
