

VHF-RF-TV-RECEIVER

Prepared by: Chian Kian Sum

ABSTRACT

This project consist of 3 parts, the first part is the Receiver part, second is the Pre amplifier part while the last is the Output part, that is the sound generated by the receiver. In this report, I will fully describe the VHF-RF-TV-Receiver that I construct and the actual operation of the receiver. The components that are used in here will also be introducing and the function of each of them will be discussed. Block Diagram of the interior operation of the project is shown in the report to explain the working more clearly. And the Circuit Diagram is printed to show the working of the project with component symbols that make it more clearly with interior operation than Block diagram.

Alternative results will be shown and some alternatives in completing this project and its disadvantages and difficulties encountered or met will be included too.
