

TEMPERATURE ADAPTER FOR DMM

Prepared by: Loke Wing Rick

ABSTRACT

As I am in my last semester in the course of DEE, I needed to apply all the knowledge that I have acquired for the last previous semester to design and construct a device for my project. I choose to construct a Temperature Adapter for DMM for my project tile. The application of the Temperature adapter is to measure the temperature by using digital multimeter with the range between -30 to +400. The adapter is very easy to operate and quite accurate compared to those thermometer.
