

HIGH SPEED WARNING DEVICE

Prepared by: Hau Han Shyong

ABSTRACT

Here is a simple and inexpensive circuit to generate audible sound reminds the driver when the speed of the vehicle is exceeded. This alarm circuit is called high speed warning device. Nowadays we can see many highways in the big city for example in KL. When somebody is driving along the high way, the road is very straight. The user may be very boring and driving speedy along the highway. Otherwise we also not care about the tachometer of the car when driving. So, sometimes we will forget to control the speed of car. These facilities of the car will be added on the tachometer part to remind user anytime.
