

DIGITAL SIGNAL PROCESSING OF IMAGE FILTERING BY USING MATLAB

Prepared by: Lim Siu Tean

ABSTRACT

This is a programming base project and MATLAB is the method that I am using to perform image-filtering function in my project. MATLAB is the latest high programming language that can use to do computing and designing for engineering field.

There are 5 image filtering method with different types of filter of different value designed have been take into consideration in the project. The result analysis is arrange follow after the program analysis and description in order to let people more understand the program flow with respect to the output image.
