

HEADSET COMMUNICATOR

Prepared by: Chong Fatt Keong

ABSTRACT

This project report shows the introduction of 'Headset Communicator' at the beginning. Then, this report will show the basic information regarding the IC used (TDA 7052, TL 072 and LM 8560). The construction of the circuit will be shown after the Information of IC. Inside the construction part contains a lot of figures to help reader more understand regard the specified part.

After that, the following part is the Operation. This Operation part shows how the circuit works. There also contain a lot of figure and block diagram to enlarge the understanding in the specified part. For the List of Component is located after the Operation part. Within this part, we could know what component will be used in this Headset Communicator.

Then continue with the Problem Encountered and solution part. It explains the problems encountered and the solutions when I was doing this project. The following part is the Conclusion. Then, the reference is indicated alter the conclusion. This reference show where can find information regarding the project. Lastly is the appendix. The appendix contains lot of information regarding the IC of the project circuit.
